

[tasklist.org](http://tasklist.org) - A comprehensive list of processes running in your computer

Filename: IconMgr.Exe

Name: E-color

Description: Sets the colour of your monitor when running games that recognise E-Color so that you get 'what the game designer intended' when you see the game. Also allows monitor calibration through a program called 3-Deep. If you play a lot of games it can be useful. Can be disabled from starting up from within the program

Recommendation: User's choice - depends whether a user deems it necessary

We found that [Easy SpyRemover](#) is the most effective tool for removing this file.
