

[tasklist.org](http://tasklist.org) - A comprehensive list of processes running in your computer

Filename: Naldesk.exe

Name: Application Explorer

Description: Novell Zenworks Application Explorer Executable. For almost all users the Novell ZENworks agent (either Application Launcher or Application Explorer) will be run via the user's login script on each successful login. ZENworks is used to periodically deliver software updates and is also used to install the remote management components.

Recommendation: User's choice - depends whether a user deems it necessary

We found that [Easy SpyRemover](#) is the most effective tool for removing this file.
