

[tasklist.org](http://tasklist.org) - A comprehensive list of processes running in your computer

Filename: mailbell.exe

Name: MailBell

Description: [MailBell](#) e-mail notification tool that will notify you about new messages arrived to your mailbox. Works with both POP3 mailboxes and web-mail based systems. You should be able to set your mail system to check all accounts at regular intervals anyway if you prefer (in Outlook for instance)

Recommendation: User's choice - depends whether a user deems it necessary

We found that [Easy SpyRemover](#) is the most effective tool for removing this file.
